**INSTITUTIONAL STATISTICS**

The Institutional Statistics Report provides a framework for the analysis of every other report at SSC. To understand the data collected, one must be familiar with the characteristics of the student body. This report is compiled each academic year from the summer, fall, and spring semesters and provides demographics and statistical descriptors of learners at SSC. The report is compiled by Academic Affairs after receiving the data from the Information Technology Department. The student data supplied by IT covers topics such as age, ethnicity, income level, home city, and ACT scores.

**2022-2023 Institutional Statistics Results**

The data collected for this report arose from three different semesters – summer 2022, fall 2022, and spring 2023. The data has not been aggregated since many of the students are duplicated and would give misleading information. For example, Table 13 shows student classification by gender. Therefore, adding all the freshman for the three semesters would result in a miscount since some of the freshmen become sophomores during the year.

Statistics from the reports reveal that the majority of the students from each semester are under 23 years old with the largest majority under 21 years old. The median age of SSC students was between 19 and 21 years old in all three of the semesters reported. For all three semesters, more students were part-time (summer 94%, fall 54%, and spring 55%). Of the 2112 unduplicated (unique) students, the majority of the students identified as white or Native American with about 42.9% of the students identifying white and 20.5% identifying as Native American.

Table 14 lists the unduplicated ACT scores for the FY 2022-2023. The majority of students who have taken the ACT and attend SSC have scores that fall between 15 and 24. Over 1091 of the students did not have an ACT score.

Representative data for students by home community is given in Table 15 with only the fall 2022 semester shown. This data reflects the main ten communities with these changing positions by one or two places each semester. The first three home communities remain constant each time. These ten communities comprise over 68% of the SSC student body each semester for FY2022-2023.

### 2022-2023 Institutional Statistics Analysis

The analysis of the data from the 2022-2023 Institutional Statistics reveals the largest cohort of the fall students are sophomores.. Through the leadership of the Vice President of Academic Affairs, the SSC faculty, Student Services, and staff will continue with the initiative toward degree completion. With the largest majority of students under twenty-one and from our five county area, the assessment team will be watching and evaluating the number of freshmen listed in the institutional statistics.
